

The D-Viral 1000 Clean Air Dispenser works like MAGIC! No, actually it works like SCIENCE, using Chlorine Dioxide (CLO₂) to deodorize and eliminate bacteria in a small space, 300-500sf.

Dry CLO₂ in a packet is put into a ventilated container, humidity releases the CLO₂, and bacteria, odors, and musty air are oxidized (NOT covered up!).

The container can SAFELY be placed in kitchens, lockers, duct work, bathrooms, public areas, cars, elevators, and other enclosed spaces.

D-Viral 1000 Clean Air Dispenser immediately freshens the air, not merely MASKING odors, but ELIMINATING them by oxidization.

At the end of 90 days, simply open the D-Viral 1000 container, dispose of the spent D-Viral 2000 CLO₂ packet properly, put in a replacement D-Viral 2000 CLO₂ packet, close the container and replace it.

D-Viral has a range of cleaning and sanitization solutions based on EPA-approved and scientifically proven technology. We can economically solve your sanitizing needs, whether they are for one elevator or multiple facilities of 1000's of square feet.

Chlorine Dioxide is the most effective cleaning and bacterial remediation product on the market. It is the perfect product to use for mopping floors, cleaning bathrooms, and sanitizing major touch points in your facility. CLO₂ provides hospital-grade sterilization every time it is applied. It is non-toxic, and eliminates odors and bacteria while providing a clean air environment.

Remember! Chlorine Dioxide does not simply mask odors, but effectively eliminates them from the air and from surfaces. D-Viral's products are formulated and priced to be easily applied either by our trained personnel or by your custodial staff, to fit into your budget, and to GET THE JOB DONE!
